| | - XML | |

Business Continuity

By building a solid IT platform as Business Infrastructure, system availability can be maximized with;

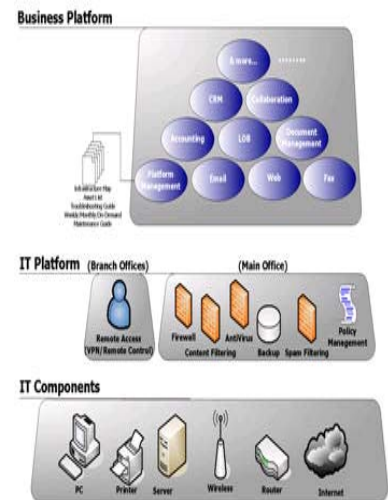

- Security (Content Filtering, Firewall, AntiVirus, AntiSpyware)
- Redundancy (Clustering, Mirroring, Backup, Restore)
- Virtualization
- Remote Access (VPN, SSL-VPN, Terminal Service, Remote Control)
- Performance

Disaster Recovery This should not happen, but happens ...

- Virtualization**
- Lower hardware cost (ave. \$331,000)
 - Increase server utilization (ave. 60% from 10%)
 - Reduce maintenance cost & Downtime
 - Simplify software maintenance
 - Simplify backup/restore process
 - Streamline development and test environment

Network Infrastructure - Design & Management

More control over your IT assets. More power to deliver the highest levels of services. More confidence in your IT organization. At Jspectra, we are committed to continuously providing you with the solutions you need to empower your staff and strengthen your IT organization.
